

MVC Architecture – HouseRent Application

Description

The HouseRent application follows the Model-View-Controller (MVC) architecture separating the application into Model, View (Routes), and Controller layers.

MVC Architecture Diagram

Model Layer

Handles data schemas and database operations using Mongoose with MongoDB.

Controller Layer

Receives requests, performs business logic, communicates with models, and returns responses.

View (Routing) Layer

Defines REST API endpoints and invokes controller methods.

Advantages of MVC

- Separation of Concerns
- Scalability
- Reusability
- Easier Testing
- Collaboration-Friendly

Conclusion

MVC provides a modular, scalable, and maintainable architecture for the HouseRent application.
