Problem Statement

People searching for rental houses often struggle to find genuine and verified properties because rental information is scattered across multiple sources. Many platforms contain outdated or fake listings, making the rental process time-consuming and unreliable.

Property owners face difficulties in managing their property listings, updating information, handling bookings, and reaching potential tenants efficiently.

Administrators need a secure and centralized system to verify property owners, monitor platform activities, and manage users, properties, and bookings effectively.

Customer Needs

- A secure platform with verified property listings.
 - Easy property search and booking process.
 - Safe user authentication and account management.
 - Simple property management for owners.
 - Secure image upload for property listings.
 - Admin verification to prevent fake owners.
 - Easy booking history and profile management.
-

Pain Points

- Fake or unverified property listings.
- Difficulty finding suitable rental houses.
- Manual management of property details.

- Lack of secure authentication.
- Poor communication between users and owners.
- No centralized booking management.
- Time-consuming rental process.

Proposed Solution

HouseRent is a MERN Stack-based rental management platform that connects users, property owners, and administrators on a single secure platform. It provides verified property listings, JWT-based authentication, owner approval by admins, property booking, image uploads using Cloudinary, email-based password recovery, and an admin dashboard for complete system management.

Expected Benefits

- Faster and easier house rental process.
- Verified and trustworthy property listings.
- Secure user authentication.
- Efficient property and booking management.
- Better experience for users, owners, and administrators.
- Reduced fraudulent listings through admin approval.
- Centralized and user-friendly rental management system.

I am	Identify the distinct customer segment with 3-4 key defining characteristics - who exactly are they?		E.g., An early-stage small business owner, tech-savvy but resource-constrained, scaling rapidly.
I'm trying to	Detail the precise outcome, job-to-be-done, or critical functional goal they need to achieve - what is their primary objective?		E.g., Automate complex monthly payroll processing and compliance reporting to save time.
but	Pinpoint specific challenges, constraints, or friction points that prevent progress - what is the biggest obstacle?		E.g., Current manual steps are error-prone; lack of integration with the existing time-tracking software.
because	Uncover the systemic, technological, or process-based root cause of this conflict - what is the core problem?		E.g., Legacy data schemas are incompatible; no direct API support for the new time-tracking platform.
which makes me feel	Map the emotional response and mental state triggered by this frustration - what is their immediate feeling?		E.g., Overwhelmed by compliance risk, anxious about making an error, stressed by inefficient workflows.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A house seeker (tenant)	Find a genuine rental house and book it easily	It is difficult to find verified properties and trusted owners	Many listings are fake, outdated, or incomplete	Frustrated, confused, and worried about choosing the wrong property
PS-2	A property owner	List and manage my rental properties efficiently	Managing property details, images, and bookings manually is difficult	There is no centralized and secure platform to handle everything	Stressed, inefficient, and concerned about losing potential tenants
